Hi Ford Motor Company,

I am currently a Front End Software Engineer building a marketplace for surfers and photographers called FLMR (React, TypeScript, Firebase, Node) and most recently was a `Senior Software Engineer (Front End)` at Acuity Brands. Responsibilities included planning and executing development of a hybrid web/mobile application utilizing technologies such as React, TypeScript, RTKQuery, Git, Azure, Jest and many others.

Also responsible for mentoring junior developers, collaborating with architects, design, management and other engineers daily under an `Agi-Fall (Agile + Waterfall)` team methodology.

While keeping this cover letter short, this quick description only scratches the surface of my experience and ability. That said, I look forward to learning more about the Front-End Software Engineer Position!

Best,
