Arkestro

I am currently a Software Engineer with 8+ years of experience as well as the owner of FLMR, a full-stack SaaS marketplace for surfers, photographers and videographers built with React, TypeScript, Firebase and Node.js amongst many other technologies. I am currently a full-stack engineer contracting at Abnormal Security and was most recently a full time employee as a `Senior Software Engineer ( Front End )` at Acuity Brands. My responsibilities at Acuity included but were not limited to planning and executing development of a hybrid web/mobile application from concept to production while utilizing best in slot technologies such as React, TypeScript, Redux / RTK Query, Git, Lambda, Node.js, Azure, and Jest.

What makes me stand out from other software engineers and developers is that I am naturally a very social and collaborative person. Not only do I love to create amazing products, but I sincerely enjoy working closely with other people and teams of various skillsets and backgrounds. I'm never one to shy away from a quick chat to figure something out or help someone in need - even for just a quick coffee chat.

If I'm not writing code, there is a good chance I am either playing video games or trying to find some waves to surf or snow to ride. Hope to hear back soon!
